List three data sources Power BI can connect to.

1. SQL Server 2. Excel 3. CSV files (and many others such as SharePoint, Oracle, etc.)

What is the first step to import data into Power BI Desktop?

Click on 'Get Data' from the Home ribbon and select the desired data source.

How do you refresh imported data in Power BI?

Click the 'Refresh' button in Power BI Desktop or set up scheduled refresh in Power BI Service.

What file formats can Power BI import directly? (Name two.)

Power BI can import .csv and .xlsx files directly.

What does the 'Navigator' window show after selecting a data source?

The Navigator window displays the available tables, sheets, or queries from the chosen data source.

Import Sales_Data.csv and load only the 'Product' and 'Price' columns.

In the Navigator, select Sales_Data.csv, click 'Transform Data', then remove all columns except 'Product' and 'Price', and click 'Close & Load'.

How would you change OrderDate to a date format during import?

In Power Query, select the 'OrderDate' column, then change the data type to 'Date' from the column tools.

What is the difference between 'Load' and 'Transform Data' in the import dialog?

'Load' imports the data directly into Power BI, while 'Transform Data' opens Power Query to clean and shape the data before loading.

Why might you see an error when connecting to a SQL database? (Name one reason.)

One reason could be invalid login credentials or insufficient permissions to access the database.

How do you replace a data source after importing it?

Go to 'Home' → 'Transform Data' → 'Data Source Settings', then edit or change the connection details to a new source.
